

Candidate Numerical Reasoning Report

Sova Sample

10/05/2021

Introduction

This report provides an overview of your results after completing the Numerical Reasoning test. The test measures your reasoning skills when dealing with numerical novel information. An overview of what the test measures, your result and what this means, is provided below.

The Numerical Reasoning test assesses how quickly and accurately you can process novel numerical information and use this to calculate the answer to the question. This type of reasoning ability is involved in tasks that require analysis and interpretation of numerical data, such as working with graphs or budgets, or carrying out various calculations. Your result is based on the number of questions you answered correctly and how quickly you provided the correct answer. Your result is then compared to others who have previously completed the assessment.

Numerical Reasoning

Taking into account the number of questions answered correctly, and the time taken for each correct answer, you scored below average on this reasoning test. A below average numerical reasoning score may indicate you find it more challenging working in roles that place a strong emphasis on using and responding to numerical information.

You may wish to consider allowing yourself more time when you know you will be facing activities that involve working with novel numerical data, such as completing complex calculations and interpreting graphs and charts. You may consider critically evaluating financial reports in newspapers and journals to develop your confidence in working with numerical data beyond your natural comfort zone.
