

# Candidate Logical Reasoning Report

## Sova Sample

10/05/2021

# Introduction

This report provides an overview of your results after completing the Logical Reasoning test. The test measures your reasoning skills when dealing with abstract information. An overview of what the test measures, your result and what this means, is provided below.

The Logical Reasoning test assesses how quickly and accurately you can process abstract information, such as identifying patterns in a sequence. This type of reasoning ability is involved in tasks that involve more abstract information or data. Your result is based on the number of questions you answered correctly and how quickly you provided the correct answer. Your result is then compared to others' who have previously completed the assessment.

## Logical Reasoning

Taking into account the number of questions answered correctly, and the time taken for each correct answer, you scored below average on this reasoning test. A below average logical reasoning score may indicate you find it more challenging working in roles that place a strong emphasis on the interpretation of abstract data to draw logical conclusions.

You may wish to consider allowing yourself more time when you know you will be facing activities that involve working with abstract materials such as flowcharts or diagrams which represent relationships, patterns and sequences. You may consider practicing your abstract reasoning through solving puzzles to develop your confidence in working with abstract data beyond your natural comfort zone.
